

ACTIVE DIRECTORY ENUMERATION CHEAT SHEET

By Hack Academy

This cheat sheet provides a structured overview of commands and tools for domain enumeration, privilege escalation, and reconnaissance in Active Directory environments. Use it as a quick reference for cybersecurity tasks.

Domain Enumeration

Using PowerView

Task	Command
Get Current Domain	Get-Domain
Enumerate Other Domains	Get-Domain -Domain
Get Domain SID	Get-DomainSID
Get Domain Policy	Get-DomainPolicy
System Access Policy	Get-DomainPolicy Select-Object -ExpandProperty SystemAccess
Kerberos Policy	Get-DomainPolicy Select-Object -ExpandProperty KerberosPolicy

Domain Controllers

Task	Command
List Domain Controllers	Get-DomainController
Specify Domain	Get-DomainController -Domain

Domain Users

Task	Command
Save All Users to File	<code>Get-DomainUser Out-File -FilePath .\DomainUsers.txt</code>
Specific User Properties	<code>Get-DomainUser -Identity -Properties DisplayName, MemberOf Format-List</code>
Enumerate Logged-On Users on Machine	<code>Get-NetLoggedon -ComputerName</code>
Enumerate Session Information	<code>Get-NetSession -ComputerName</code>
Find User Locations in Domain	<code>Find-DomainUserLocation -Domain Select-Object UserName, SessionFromName</code>

Domain Computers

Task	Command
List Domain Computers	<code>Get-DomainComputer -Properties OperatingSystem, Name, DnsHostName Sort-Object -Property DnsHostName</code>
Enumerate Live Machines	<code>Get-DomainComputer -Ping -Properties OperatingSystem, Name, DnsHostName Sort-Object -Property DnsHostName</code>

Groups And Group Members

Task	Command
Save All Domain Groups	<code>Get-DomainGroup Out-File -FilePath .\DomainGroup.txt</code>
Get Members of a Specific Group	<code>Get-DomainGroup -Identity '' Select-Object -ExpandProperty Member</code>
Enumerate Local Groups on Machine	<code>Get-NetLocalGroup Select-Object GroupName</code>
Enumerate Members of Specific Local Group	<code>Get-NetLocalGroupMember -GroupName Administrators Select-Object MemberName, IsGroup, IsDomain</code>

Enumerating Group Policies

Task	Command
List All GPOs	Get-DomainGPO -Properties DisplayName Sort-Object -Property DisplayName
Enumerate GPOs for a Specific Machine	Get-DomainGPO -ComputerIdentity -Properties DisplayName Sort-Object -Property DisplayName

Shares Enumeration

Task	Command
List Domain Shares	Find-DomainShare
Shares Accessible to Current User	Find-DomainShare -CheckShareAccess
Find Files Matching Keywords	Find-InterestingDomainShareFile -Include *passwords*

Enumerating Trusts

Domain Trusts

Task	Command
List Domain Trusts	Get-DomainTrust
Map Trust Relationships	Get-DomainTrustMapping

Forest Trusts

Task	Command
List Forest Domains	Get-ForestDomain
Map Forest Trusts	Get-ForestTrust

User Hunting

Task	Command
Find Machines Where User Has Admin Access	Find-LocalAdminAccess -Verbose
Find Local Admins Across Domain Machines	Find-DomainLocalGroupMember -Verbose
Locate Sessions of Specific Users or Domain Admins	Find-DomainUserLocation Select-Object UserName, SessionFromName
Test Admin Access	Test-AdminAccess

Using BloodHound

Method	Command
Remote Collection	bloodhound-python -u -p -ns -d -c All
On-Site Collection	.\SharpHound.exe --CollectionMethod All --LdapUsername --LdapPassword

Export Enumerated Data

Task	Command
Export Domain Users to XML	Get-DomainUser Export-CliXml .\DomainUsers.xml
Import for Later Analysis	\$DomainUsers = Import-CliXml .\DomainUsers.xml

Useful Tools

Tool	Description
Idapdomaindump	Dumps LDAP information.
adidnsdump	Dumps integrated DNS information.
ACLIGHT	Discovers privileged accounts.
ADRecon	Provides detailed Active Directory recon.
